

# *The 5 secret sexual signals*

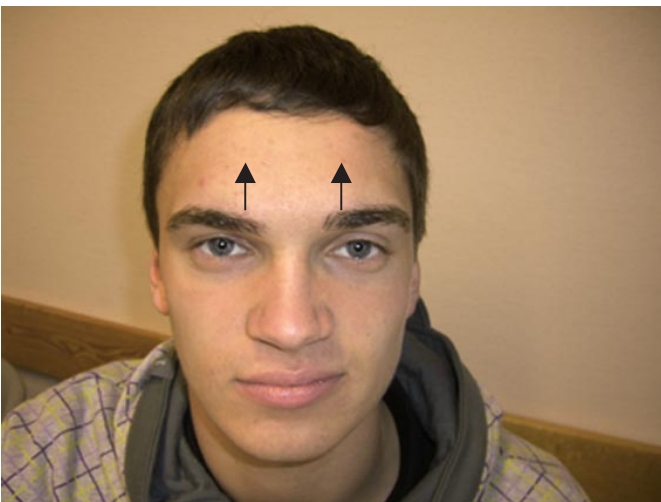

## *The flirting triangle*

■ *Our eyes normally make a zig-zag motion when we look at a person: We look from eye to eye across the nose.*

■ *When we feel attracted to a person, the triangle gets bigger: We look from eye to eye, but also at nose and mouth.*

## *Eyebrow flash*

*When we first see somebody we're attracted to our eyebrows rise and fall. But we don't notice, because it only lasts a fifth of a second.*

## Blinking

*If we like a person that we see, our pupil size and our blinking rate increase.*

## Pointing

*If our body doesn't point toward someone else, there doesn't seem to be any attraction or interest.*

*If we find someone attractive our feet, legs, hands and fingers point towards that person. It's an unconscious indicator to make our intentions known.*

# *M*irroring

*Mirroring someone's behaviour simply means that we do what ever the other person does.*

*The theory behind mirroring is that we like persons who are like us, because we feel like on the same level.*
